

Safari Lounge Commercial Fusion Niche Pack

Format: NotebookLM-ready private culinary intelligence source, chef production manual, restaurant consulting asset, menu development commercialization product, catering and bundle revenue blueprint.

Commercial thesis: This is not a cookbook. It is a reusable hospitality operating system built from sauce banks, batchable proteins, starch profit absorbers, portable lunch formats, bar snacks, catering trays, and weekly preorder rituals. Every formulation below is original, metric, scalable, and designed for venue execution.

Copyright boundary: The pack does not reproduce protected cookbook recipes. It extracts commercial patterns from the current Recipe Intelligence Database and turns them into original production formulas and monetizable hospitality systems.

Venue concept: Afro-Asian-Latin commercial fusion with Safari Lounge positioning: familiar proteins, bold sauces, rice and wrap bases, shareable trays, visible abundance, delivery viability, and limited weekly allocation drops.

Operating logic: One marinade feeds several proteins. One wet fry base feeds multiple dishes. One rice engine supports trays, bowls, and staff meals. One wrap engine supports lunch. One snack system lifts beverage spend. One catering system converts prep into large-ticket orders. One weekly special system creates repeat demand.

Module A - Core Marinade and Sauce Bank

Commercial function inside the venue: This module creates the economic engine. Sauces and marinades convert low-cost base inventory into multiple high-perceived-value dishes. They reduce menu complexity, increase cross-utilisation, create upsells, and become future bottled or licensed IP.

Safari Char-Grill Master Marinade

Commercial position / venue role: Primary protein marinade for chicken, beef, pork, goat, skewers, wings, and grilled tray specials.

Standard batch yield: 10 kg trimmed protein marinade load; approx. 22-28 portions depending cut.

Ingredient	Metric quantity
Light soy sauce	900 ml
Fresh lime juice	450 ml
Neutral oil	650 ml
Brown sugar	480 g
Fresh garlic, crushed	280 g
Fresh ginger, grated	220 g
Tomato paste	350 g
Smoked paprika	120 g
Ground coriander	80 g
Ground cumin	70 g
Black pepper	55 g
Fine salt	95 g
Water	600 ml

Production method

1. Blend all liquid ingredients with garlic, ginger, sugar, tomato paste, spices, and salt until smooth.
2. Pour over 10 kg trimmed protein in food-safe tubs and mix until fully coated.
3. Marinate chicken 6-18 hours, beef/goat/pork 12-24 hours.
4. Drain before grilling; reserve no used marinade for service.
5. Grill over high heat, then finish in oven if pieces are thick.

Prep-ahead and holding notes: Hold raw marinated proteins covered at 0-4 C. Label by protein and use within 24 hours for chicken or 48 hours for red meat.

Reheating or service finish notes: Finish with Gochu-BBQ Glaze or Coconut Curry Mop depending menu family.

Packaging/plating notes: Use black tray liners for BBQ drops, rice bowls, skewers, and catering trays. Garnish with lime, pickled onion, and herbs.

Allergen notes: Contains soy. Can be made gluten-free with tamari.

Food cost logic: High cross-utilisation lowers prep cost: one batch supports at least six menu items. Marinade cost should remain below 6-9% of finished item selling price.

Menu pricing logic: Proteins using this marinade can carry 68-75% gross margin when paired with rice, wraps, or fries.

Cross-application opportunities: Chicken skewers, beef bowls, goat wet fry, pork belly bites, family trays, bar snacks, bottled marinade pilot.

NotebookLM tags / future retrieval relevance: marinade-bank; grill-engine; cross-utilisation; Safari-Lounge-IP; batch-protein; soy-allergen

Gochu-BBQ Sticky Glaze

Commercial position / venue role: Premium gloss sauce for grilled meats, wings, pork belly, brisket-style beef, and scarcity drops.

Standard batch yield: 5 litres glaze; coats approx. 18-24 kg cooked protein.

Ingredient	Metric quantity
Gochujang	1.2 kg
Tomato ketchup	1.4 kg
Honey	900 g
Light soy sauce	650 ml
Rice vinegar	500 ml
Brown sugar	650 g
Garlic puree	220 g
Ginger puree	150 g
Sesame oil	120 ml
Water	900 ml

Production method

1. Combine all ingredients except sesame oil in a heavy pot.
2. Simmer gently for 18-22 minutes, whisking regularly until glossy.
3. Finish with sesame oil off heat.
4. Cool rapidly in shallow pans and store chilled.
5. Brush on proteins during final 3-5 minutes of cooking or toss hot cooked pieces in glaze.

Prep-ahead and holding notes: Keeps 7 days chilled. Hot-hold only the service amount; keep bulk chilled.

Reheating or service finish notes: Reheat gently with a splash of water. Do not boil hard or sugars may scorch.

Packaging/plating notes: Use visible glaze: lacquered skewers, sticky wings, shiny rice bowls, family tray drizzle.

Allergen notes: Contains soy, sesame, and chili. Check gochujang for wheat.

Food cost logic: Transforms standard proteins into premium visual products. Sweet-heat gloss increases perceived value with low added cost per portion.

Menu pricing logic: Use as a +\$2 sauce upgrade, premium wing flavour, or Friday limited tray feature.

Cross-application opportunities: Wings, ribs, pork belly, beef bowls, loaded fries, bottled sauce, VIP drop.

NotebookLM tags / future retrieval relevance: sticky-glaze; gochujang; BBQ; premium-pricing; visual-abundance; scarcity-drop

Coconut Curry Wet Fry Base

Commercial position / venue role: Batchable mother sauce for chicken, fish, goat, vegetables, beans, rice bowls, and family trays.

Standard batch yield: 8 litres base; enough for 32-40 wet-fry portions before protein addition.

Ingredient	Metric quantity
Neutral oil	450 ml
Onion, fine dice	2.2 kg
Garlic puree	260 g
Ginger puree	220 g
Tomato paste	650 g
Crushed tomato	2.5 kg
Curry powder	240 g
Ground turmeric	60 g
Ground cumin	80 g
Ground coriander	90 g
Coconut milk	3.2 litres
Water or stock	1.6 litres
Fine salt	110 g
Lime juice	180 ml

Production method

1. Sweat onion in oil until soft and lightly golden.
2. Add garlic and ginger; cook 2 minutes.
3. Add tomato paste and spices; fry 4-5 minutes until oil separates.
4. Add crushed tomato, coconut milk, water, and salt.
5. Simmer 25 minutes, blend half if smoother texture is needed, then finish with lime.

Prep-ahead and holding notes: Blast chill in 2 litre containers. Shelf life 4 days chilled or 3 months frozen.

Reheating or service finish notes: Reheat base to 75 C before adding cooked protein or vegetables. Adjust thickness with stock.

Packaging/plating notes: Serve in black bowls, rice trays, or lidded delivery bowls. Garnish with herb oil and pickled chili.

Allergen notes: Contains coconut. Gluten-free if stock and curry powder are verified.

Food cost logic: Mother sauce supports high menu variety from one prep batch and protects margin through rice pairing.

Menu pricing logic: Price as comfort-premium: bowl, tray, or family pot. Use protein tiering for margin control.

Cross-application opportunities: Chicken curry bowl, coconut fish, goat wet fry, vegetable curry, curry fries, catering tray.

NotebookLM tags / future retrieval relevance: mother-sauce; coconut-curry; wet-fry-engine; batchable; delivery-friendly; low-inventory-variety

Green Herb Lime Crema

Commercial position / venue role: Cold finishing sauce for wraps, grilled fish, rice bowls, bar snacks, and premium plating contrast.

Standard batch yield: 3 litres crema; approx. 150 x 20 ml portions.

Ingredient	Metric quantity
Greek yoghurt	1.8 kg
Mayonnaise	700 g
Fresh coriander	220 g
Fresh parsley	120 g
Lime juice	300 ml
Garlic	80 g
Jalapeno or green chili	90 g
Fine salt	45 g
Water	250 ml

Production method

1. Blend herbs, lime, garlic, chili, salt, and water until bright green.
2. Whisk into yoghurt and mayonnaise.
3. Pass through coarse sieve if using squeeze bottles.
4. Store in dated bottles under refrigeration.

Prep-ahead and holding notes: Keep chilled at 0-4 C. Use within 3 days for best colour.

Reheating or service finish notes: Serve cold only. Do not heat.

Packaging/plating notes: Use squeeze-bottle zigzag over bowls, wraps, fish, fries, and snack platters.

Allergen notes: Contains dairy and egg unless vegan mayo/yoghurt are used.

Food cost logic: Low portion cost with high perceived freshness. Helps justify premium pricing on fried or grilled items.

Menu pricing logic: Charge as included premium finish or +\$1 extra sauce.

Cross-application opportunities: Wraps, fish tacos, loaded fries, rice bowls, skewers, staff meal upgrade.

NotebookLM tags / future retrieval relevance: cold-sauce; crema; wrap-system; visual-finish; upsell-sauce; dairy-egg-allergen

Module B - Pan Protein / Wet Fry Engine

Commercial function inside the venue: This module converts cooked or semi-cooked proteins into fast service items. Wet fry creates comfort, sauce gloss, aroma, and delivery durability. It also lets the venue run controlled protein batches and finish them to order.

Base Wet Fry Aromatic Mix

Commercial position / venue role: Universal pan-finish base for beef, goat, chicken, mushrooms, and beans.

Standard batch yield: 6 kg aromatic base; enough for 60-75 portions.

Ingredient	Metric quantity
Neutral oil	500 ml
Red onion, sliced	3.5 kg
Green capsicum, sliced	1.2 kg
Tomato, diced	2.2 kg
Garlic puree	260 g
Ginger puree	180 g
Green chili, sliced	120 g
Tomato paste	450 g
Fine salt	95 g
Black pepper	45 g

Production method

1. Heat oil in tilt pan or rondeau.
2. Cook onions until translucent with light colour.
3. Add capsicum, garlic, ginger, chili, and tomato paste; fry until aromatic.
4. Add tomato and seasoning; cook until thick and jammy.
5. Cool rapidly and portion into 600 g service packs.

Prep-ahead and holding notes: Hold chilled 3 days or freeze in packs. This is a base, not a finished sauce.

Reheating or service finish notes: Reheat 600 g base in pan, add 1 kg cooked protein, loosen with 150 ml stock, finish with sauce.

Packaging/plating notes: Visible onion and pepper strips signal abundance in bowls and trays.

Allergen notes: No major allergens unless stock additions contain allergens.

Food cost logic: Aromatic base adds perceived volume and reduces protein load per portion without making the dish feel cheap.

Menu pricing logic: Wet fry items should sell at 3.2-4x ingredient cost due to labour and aroma value.

Cross-application opportunities: Beef wet fry, goat wet fry, mushroom wet fry, breakfast bowls, loaded fries.

NotebookLM tags / future retrieval relevance: wet-fry-base; pan-engine; cross-utilisation; labour-control; abundance-illusion

Black Pepper Beef Wet Fry

Commercial position / venue role: Fast premium beef pan protein for rice bowls, wraps, bar plates, and office trays.

Standard batch yield: 20 portions x 180 g finished beef mix.

Ingredient	Metric quantity
Cooked sliced beef	3.0 kg
Base Wet Fry Aromatic Mix	1.2 kg
Safari Char-Grill Master Marinade	350 ml
Beef stock	450 ml
Cracked black pepper	45 g
Gochu-BBQ Sticky Glaze	300 ml
Spring onion	180 g

Production method

1. Heat wet fry base in wide pan until bubbling.
2. Add beef and stock; toss until hot throughout.
3. Add marinade, black pepper, and glaze; reduce until glossy.
4. Finish with spring onion.
5. Hold for short service or portion directly.

Prep-ahead and holding notes: Cook beef ahead and chill sliced. Finish wet fry in 10-12 portion batches for best texture.

Reheating or service finish notes: Reheat in pan with splash of stock. Avoid microwave reheating for premium service.

Packaging/plating notes: Rice bowl: 180 g beef mix over 250 g rice. Tray: 2.5 kg beef mix over rice with pickles.

Allergen notes: Contains soy and sesame if glaze is used.

Food cost logic: Uses moderate beef volume with sauce and onion bulk. Premium perception comes from pepper aroma and gloss.

Menu pricing logic: Menu at premium bowl price; tray price should include labour and sauce premium.

Cross-application opportunities: Rice bowl, wrap, loaded fries, office tray, Friday beef drop.

NotebookLM tags / future retrieval relevance: black-pepper-beef; wet-fry; rice-bowl; office-tray; premium-protein

Coconut Goat Wet Fry

Commercial position / venue role: Culturally strong slow-cooked protein lane for weekend allocation and family trays.

Standard batch yield: 24 portions x 200 g finished goat mix.

Ingredient	Metric quantity
Cooked goat meat, boneless chunks	4.0 kg
Base Wet Fry Aromatic Mix	1.5 kg
Coconut Curry Wet Fry Base	2.0 litres
Goat cooking stock	700 ml
Lime juice	120 ml
Fresh coriander	180 g
Fine salt	as needed

Production method

1. Heat aromatic mix with goat stock.
2. Add goat and coconut curry base.
3. Simmer gently 18-22 minutes until sauce clings.
4. Finish with lime and coriander.
5. Check seasoning after reduction.

Prep-ahead and holding notes: Cook goat one day ahead until tender. Chill in stock to reduce waste and improve texture.

Reheating or service finish notes: Reheat covered with stock or curry base. Holds well in hot cabinet for 90 minutes.

Packaging/plating notes: Serve as rice tray, family curry pot, or chapati/wrap filling.

Allergen notes: Contains coconut. Check curry powder for allergens.

Food cost logic: High perceived value and strong cultural pull. Use limited allocation because goat prep time is real.

Menu pricing logic: Price above chicken and below premium steak. Use weekend scarcity to protect margin.

Cross-application opportunities: Family tray, staff meal special, Sunday preorder, wrap filling, catering protein.

NotebookLM tags / future retrieval relevance: goat-wet-fry; coconut-curry; weekend-drop; family-bundle; cultural-strength

Korean Soy Chicken Pan Protein

Commercial position / venue role: High-familiarity chicken system for lunch bowls, wraps, kids trays, and delivery.

Standard batch yield: 30 portions x 160 g finished chicken.

Ingredient	Metric quantity
Cooked chicken thigh strips	4.2 kg
Light soy sauce	500 ml
Brown sugar	350 g
Garlic puree	180 g
Ginger puree	120 g
Water	500 ml
Sesame oil	90 ml
Toasted sesame seeds	120 g
Spring onion	250 g

Production method

1. Combine soy, sugar, garlic, ginger, and water; simmer 8 minutes.
2. Add chicken strips and reduce until lightly glazed.
3. Finish with sesame oil, sesame seeds, and spring onion.
4. Cool in shallow trays or hold hot for immediate service.

Prep-ahead and holding notes: Chicken can be cooked and sliced in bulk. Sauce can be made 5 days ahead.

Reheating or service finish notes: Reheat in pan or combi with splash of water; finish with fresh spring onion.

Packaging/plating notes: Use in bowls, wraps, lunch boxes, and office trays with pickled vegetables.

Allergen notes: Contains soy and sesame.

Food cost logic: Chicken thigh keeps cost stable, reheats well, and absorbs sauce. Excellent high-volume lunch item.

Menu pricing logic: Base price moderate; upsell with egg, extra sauce, or premium rice.

Cross-application opportunities: Lunch bowls, wraps, bento-style trays, family bundle, kids rice box.

NotebookLM tags / future retrieval relevance: korean-soy-chicken; lunch-system; delivery-friendly; chicken-thigh; soy-sesame

Module C - Fish or Signature Hero Protein Lane

Commercial function inside the venue: Hero proteins create brand memory. This module gives the venue a signature plate that can be photographed, run as a limited drop, and used for premium pricing while still relying on the same sauce bank and starch bases.

Tamarind Coconut Fish Tray

Commercial position / venue role: Signature fish lane for premium rice trays, Friday specials, and lighter catering.

Standard batch yield: 18 portions x 180 g fish plus sauce.

Ingredient	Metric quantity
Firm white fish fillets	3.6 kg
Fine salt	45 g
Lime juice	180 ml
Neutral oil	180 ml
Coconut Curry Wet Fry Base	2.8 litres
Tamarind paste	220 g
Brown sugar	160 g
Fresh tomato wedges	900 g
Coriander	150 g

Production method

1. Season fish with salt, lime, and oil for 20 minutes.
2. Roast or pan-sear fish until just cooked.
3. Simmer curry base with tamarind and sugar until balanced.
4. Add tomato wedges for final 3 minutes.
5. Tray fish over rice and spoon sauce over only at service.

Prep-ahead and holding notes: Cook sauce ahead. Fish should be cooked close to service; avoid long hot holding.

Reheating or service finish notes: Reheat sauce separately. Finish fish in oven at 160 C until just hot.

Packaging/plating notes: Use shallow trays: rice base, fish portions, sauce, tomato, herb garnish.

Allergen notes: Contains fish and coconut.

Food cost logic: Fish has higher waste risk, so run as preorder or controlled Friday allocation.

Menu pricing logic: Price as premium seafood tray with minimum order or limited special.

Cross-application opportunities: Friday fish drop, catering tray, rice bowl, Safari Lounge hero plate.

NotebookLM tags / future retrieval relevance: fish-lane; tamarind-coconut; premium-tray; preorder-control; seafood-allergen

Crispy Gochu Fish Bites

Commercial position / venue role: Bar snack and lunch protein designed for visual sauce gloss and shareability.

Standard batch yield: 80 pieces; approx. 20 snack portions.

Ingredient	Metric quantity
Firm white fish chunks	2.4 kg
Rice flour	600 g
Cornflour	500 g
Fine salt	45 g
Smoked paprika	35 g
Cold soda water	1.1 litres
Gochu-BBQ Sticky Glaze	750 ml
Lime wedges	20 portions

Production method

1. Mix rice flour, cornflour, salt, and paprika.
2. Whisk in soda water to make light batter.
3. Coat fish and fry at 180 C until crisp.
4. Drain well and toss lightly with warm glaze or serve glaze side-car.
5. Serve immediately.

Prep-ahead and holding notes: Batter dry mix can be scaled and stored. Fish must stay chilled and dry before frying.

Reheating or service finish notes: Not ideal for reheating. Sell for dine-in, bar, or immediate pickup.

Packaging/plating notes: Serve in metal trays or paper boats with lime, crema, and pickles.

Allergen notes: Contains fish. Gluten-free if flour sources are verified.

Food cost logic: High perceived value and strong beverage pairing; manage waste by portioning fish before service.

Menu pricing logic: Snack price should target 75%+ gross margin; charge extra for sauce flight.

Cross-application opportunities: Bar snack, taco filling, loaded fries topping, limited happy-hour drop.

NotebookLM tags / future retrieval relevance: crispy-fish; bar-snack; sauce-gloss; shareability; dine-in-priority

Safari Smoke-Rub Roast Beef

Commercial position / venue role: Hero roast protein for slicing into trays, wraps, bowls, and premium bar plates.

Standard batch yield: 5 kg raw beef yields approx. 3.6-4.0 kg cooked; 24-30 portions.

Ingredient	Metric quantity
Beef rump cap or topside	5.0 kg
Fine salt	95 g
Brown sugar	80 g
Smoked paprika	70 g
Black pepper	55 g
Ground coriander	45 g
Garlic powder	45 g
Neutral oil	180 ml

Production method

1. Mix dry rub and oil into paste.
2. Coat beef evenly and refrigerate 12-24 hours.
3. Roast at 150 C to internal 54-58 C depending desired doneness.
4. Rest 45 minutes before slicing.
5. Chill for thin slicing or serve warm for trays.

Prep-ahead and holding notes: Cook ahead for cold slicing. Keep trim for fried rice, staff meals, or wet fry.

Reheating or service finish notes: Reheat sliced beef with stock or glaze; avoid drying in hot cabinet.

Packaging/plating notes: Slice thin for abundance; fan over rice or flatbread with crema.

Allergen notes: No major allergens in base rub.

Food cost logic: Roast beef creates premium perception while trim supports secondary revenue items.

Menu pricing logic: Sell as premium protein add-on or limited roast tray.

Cross-application opportunities: Wraps, rice bowls, roast beef platter, VIP tray, beef fried rice.

NotebookLM tags / future retrieval relevance: roast-beef; smoke-rub; hero-protein; trim-utilisation; premium-add-on

Module D - Carbohydrate / Rice / Base Profit Absorbers

Commercial function inside the venue: Carbohydrates protect margin, carry sauces, create visual abundance, and make trays feel generous. They are the profit absorbers that allow premium proteins to be portion-controlled without making the customer feel shorted.

Coconut Turmeric Rice Base

Commercial position / venue role: Default tray and bowl base for curry, fish, wet fry, and vegetarian systems.

Standard batch yield: 10 kg cooked rice; approx. 40 x 250 g portions.

Ingredient	Metric quantity
Long grain rice	4.0 kg
Water	5.2 litres
Coconut milk	1.6 litres
Turmeric	35 g
Fine salt	75 g
Neutral oil	120 ml
Bay leaves	8 g

Production method

1. Rinse rice until water runs mostly clear.
2. Combine water, coconut milk, turmeric, salt, oil, and bay.
3. Cook in rice cooker or covered gastronorm until tender.
4. Rest 15 minutes, fluff, and spread for safe cooling if not serving.

Prep-ahead and holding notes: Cook in two 5 kg cooked batches for easier cooling. Chill below 5 C within food-safety limits.

Reheating or service finish notes: Reheat with steam or microwave covered. Do not dry-fry reheated rice unless fully chilled first.

Packaging/plating notes: Use as yellow visual base in black bowls and family trays.

Allergen notes: Contains coconut.

Food cost logic: Low cost base supports high-margin protein and sauce sales.

Menu pricing logic: Price bowls/trays around protein; rice creates volume and perceived generosity.

Cross-application opportunities: Curry bowls, fish trays, wet fry trays, staff meal, vegetarian bowls.

NotebookLM tags / future retrieval relevance: rice-base; coconut-rice; profit-absorber; tray-base; delivery-friendly

Smoky Tomato Pilau Rice

Commercial position / venue role: High-aroma rice base for beef, BBQ, Tex-Mex, and bar snack conversion.

Standard batch yield: 12 kg cooked rice; approx. 48 x 250 g portions.

Ingredient	Metric quantity
Long grain rice	5.0 kg
Crushed tomato	2.0 kg
Water or stock	5.8 litres
Onion, fine dice	1.2 kg
Neutral oil	350 ml
Smoked paprika	90 g
Ground cumin	70 g
Fine salt	95 g
Frozen peas or corn	1.5 kg

Production method

1. Sweat onion in oil.
2. Add paprika and cumin; cook 1 minute.
3. Add tomato, stock, salt, and rice.
4. Cook covered until rice is tender.
5. Fold in peas or corn during final steaming.

Prep-ahead and holding notes: Batch cooks well. Chill quickly in shallow trays.

Reheating or service finish notes: Reheat by steam. Can become fried rice next day if properly chilled.

Packaging/plating notes: Works under beef, pork, BBQ chicken, and salsa toppings.

Allergen notes: Check stock for allergens.

Food cost logic: Adds colour and aroma with cheap inputs, making bowls feel more complete.

Menu pricing logic: Use as premium base upgrade or included in tray pricing.

Cross-application opportunities: BBQ beef bowls, Tex-Mex trays, staff fried rice, wrap filling.

NotebookLM tags / future retrieval relevance: pilau-rice; tomato-rice; BBQ-base; low-cost-abundance; cross-utilisation

Crispy Potato Hash Base

Commercial position / venue role: Breakfast, bar snack, loaded fries, and family tray extender.

Standard batch yield: 8 kg cooked potato hash; approx. 32 x 250 g portions.

Ingredient	Metric quantity
Potato, 2 cm dice	8.0 kg
Neutral oil	600 ml
Fine salt	110 g
Smoked paprika	70 g
Garlic powder	45 g
Black pepper	35 g
Spring onion	400 g

Production method

1. Steam or parboil potatoes until just tender.
2. Cool and dry thoroughly.
3. Toss with oil, salt, paprika, garlic, and pepper.
4. Roast at 210 C until crisp-edged.
5. Finish with spring onion.

Prep-ahead and holding notes: Parcook potatoes one day ahead. Roast to order for best texture.

Reheating or service finish notes: Reheat in hot oven or air fryer. Avoid covered hot holding for crisp applications.

Packaging/plating notes: Serve in snack trays, breakfast bowls, loaded bases, or side boxes.

Allergen notes: No major allergens.

Food cost logic: Potato base absorbs premium toppings and sauces while protecting protein portion costs.

Menu pricing logic: Sell as side, loaded snack, or breakfast base with high margin.

Cross-application opportunities: Loaded beef hash, breakfast bowls, bar snacks, family side trays.

NotebookLM tags / future retrieval relevance: potato-base; bar-snack-base; breakfast-system; margin-absorber; loaded-fries

Module E - Portable Street / Wrap / Lunch Systems

Commercial function inside the venue: Portable systems turn the same prep into lunch trade, delivery, staff meals, and office bundles. The goal is speed, low decision friction, and repeatable assembly.

Korean Soy Chicken Rice Wrap

Commercial position / venue role: High-volume lunch wrap using existing chicken, rice, pickles, and crema.

Standard batch yield: 25 wraps.

Ingredient	Metric quantity
Large tortillas or flatbreads	25 pieces
Korean Soy Chicken Pan Protein	3.5 kg
Coconut Turmeric Rice Base	3.0 kg
Pickled onion or cucumber	1.2 kg
Green Herb Lime Crema	750 ml
Shredded lettuce	1.0 kg

Production method

1. Warm wraps briefly to prevent cracking.
2. Lay 120 g rice, 140 g chicken, 45 g pickles, 40 g lettuce, and 30 ml crema.
3. Roll tightly, seam down.
4. Toast seam side if serving hot.
5. Cut only for dine-in; keep whole for delivery.

Prep-ahead and holding notes: All fillings prepared ahead. Assemble close to service to protect texture.

Reheating or service finish notes: Wrap can be held warm 20 minutes max or served chilled as lunch box if food-safe.

Packaging/plating notes: Wrap in branded paper, label sauce/allergen, add pickle side for premium feel.

Allergen notes: Contains wheat/gluten, soy, sesame, dairy, egg.

Food cost logic: Uses same chicken and rice as bowls, reducing inventory while opening lunch trade.

Menu pricing logic: Price slightly below bowl but protect margin through controlled protein weight.

Cross-application opportunities: Office lunch box, student lunch, staff meal, delivery combo.

NotebookLM tags / future retrieval relevance: wrap-system; lunch-trade; korean-chicken; portable; office-bundle

Black Pepper Beef Street Wrap

Commercial position / venue role: Premium portable beef format for lunch and late-night delivery.

Standard batch yield: 20 wraps.

Ingredient	Metric quantity
Large tortillas or chapati	20 pieces
Black Pepper Beef Wet Fry	3.2 kg
Smoky Tomato Pilau Rice	2.5 kg
Green Herb Lime Crema	600 ml
Pickled red onion	800 g
Crispy potato hash	1.5 kg

Production method

1. Warm wrap.
2. Add rice, beef, potato hash, pickles, and crema.
3. Roll tightly and toast until sealed.
4. Rest 1 minute before packaging.

Prep-ahead and holding notes: Keep beef and rice hot, crema cold. Assemble to order.

Reheating or service finish notes: Best served hot; reheats in sandwich press.

Packaging/plating notes: Use foil-lined wrap paper for heat retention. Do not over-sauce.

Allergen notes: Contains gluten, dairy, egg, soy, sesame depending sauce.

Food cost logic: Beef wrap gives premium perception with lower beef weight than plated main.

Menu pricing logic: Menu as premium wrap combo with side and drink.

Cross-application opportunities: Lunch wrap, late-night item, office bundle, ghost kitchen hero.

NotebookLM tags / future retrieval relevance: beef-wrap; portable-premium; wet-fry; lunch-system; ghost-kitchen

Coconut Curry Vegetable Pocket

Commercial position / venue role: Vegetarian portable item using curry base and rice for low-cost menu breadth.

Standard batch yield: 24 pockets.

Ingredient	Metric quantity
Flatbreads	24 pieces
Coconut Curry Wet Fry Base	2.4 litres
Cooked chickpeas	2.0 kg
Roasted vegetables	2.4 kg
Coconut Turmeric Rice Base	2.4 kg
Pickled chili	400 g

Production method

1. Simmer chickpeas and roasted vegetables in curry base until thick.
2. Cool filling slightly so wraps do not steam apart.
3. Fill each flatbread with rice and curry mix.
4. Fold into pocket and toast until sealed.

Prep-ahead and holding notes: Curry filling holds 3 days chilled and freezes well.

Reheating or service finish notes: Reheat filling to 75 C. Toast pocket to order.

Packaging/plating notes: Pack with napkin and small crema or chili sauce side.

Allergen notes: Contains coconut and gluten unless gluten-free wrap is used.

Food cost logic: Vegetarian item has strong margin and improves group ordering acceptance.

Menu pricing logic: Price as standard wrap; upsell extra sauce or side.

Cross-application opportunities: Vegetarian lunch, catering inclusion, staff meal, delivery option.

NotebookLM tags / future retrieval relevance: vegetarian-wrap; curry-base; low-cost-high-variety; group-ordering; coconut

Module F - Bar Snack and Share Plate Layer

Commercial function inside the venue: Bar snacks increase dwell time and beverage spend. They should be salty, saucy, shareable, fast to plate, and made from existing prep streams.

Sticky Gochu Wings

Commercial position / venue role: High-craving bar snack and weekly drop anchor.

Standard batch yield: 100 wings; 20 snack portions.

Ingredient	Metric quantity
Chicken wings	8.0 kg
Fine salt	95 g
Baking powder	80 g
Smoked paprika	70 g
Gochu-BBQ Sticky Glaze	1.5 litres
Toasted sesame seeds	150 g
Spring onion	250 g

Production method

1. Toss wings with salt, baking powder, and paprika.
2. Air-dry uncovered under refrigeration 8-18 hours.
3. Roast or fry until crisp and fully cooked.
4. Toss in warm glaze.
5. Finish with sesame and spring onion.

Prep-ahead and holding notes: Dry-season wings one day ahead. Cook in waves to control texture.

Reheating or service finish notes: Reheat unglazed wings in oven, then glaze fresh.

Packaging/plating notes: Serve in share trays with wet wipes, lime, and extra sauce.

Allergen notes: Contains sesame, soy, possible gluten in glaze.

Food cost logic: Wings have strong dopamine/craving signal and beverage pairing. Manage portion count tightly.

Menu pricing logic: Price by portion count and sauce premium. Offer extra dip upsell.

Cross-application opportunities: Bar snack, game night tray, WhatsApp drop, family add-on.

NotebookLM tags / future retrieval relevance: wings; bar-snack; gochu-bbq; share-plate; scarcity-drop

Loaded Wet Fry Potato Hash

Commercial position / venue role: Low-cost high-abundance share plate using potato, sauce, and controlled protein garnish.

Standard batch yield: 20 share portions.

Ingredient	Metric quantity
Crispy Potato Hash Base	5.0 kg
Black Pepper Beef Wet Fry	2.0 kg
Green Herb Lime Crema	700 ml
Gochu-BBQ Sticky Glaze	500 ml
Pickled onion	700 g
Spring onion	250 g

Production method

1. Re-crisp potato hash in hot oven.
2. Heat beef wet fry separately.
3. Tray potatoes, top with beef, drizzle sauces, add pickles and spring onion.
4. Serve immediately.

Prep-ahead and holding notes: All components prepped separately; assemble on order.

Reheating or service finish notes: Reheat potatoes dry and beef moist. Do not hold assembled.

Packaging/plating notes: Use wide shallow tray for visual abundance.

Allergen notes: Contains soy, sesame, dairy, egg depending sauces.

Food cost logic: Potato absorbs perceived volume while beef functions as premium signal, not bulk.

Menu pricing logic: Price as share plate. Add egg or extra beef as upsell.

Cross-application opportunities: Bar snack, office side, late-night special, family tray add-on.

NotebookLM tags / future retrieval relevance: loaded-hash; abundance-illusion; bar-spend; wet-fry; margin-protector

Pickle and Sauce Flight

Commercial position / venue role: Low-labour board that monetizes sauce bank and creates tasting behaviour.

Standard batch yield: 20 boards.

Ingredient	Metric quantity
Assorted house pickles	2.0 kg
Green Herb Lime Crema	600 ml
Gochu-BBQ Sticky Glaze	600 ml
Coconut Curry Wet Fry Base, thickened	700 ml
Flatbread crisps	1.5 kg
Lime wedges	20 portions

Production method

1. Portion pickles and sauces into ramekins.
2. Warm flatbread crisps.
3. Arrange with colour contrast and clear sauce labels.

Prep-ahead and holding notes: Pickles and sauces are prep-ahead. Board assembly is 2-3 minutes.

Reheating or service finish notes: Serve sauces cold or warm depending type; keep curry dip above 63 C if hot.

Packaging/plating notes: Use small boards or trays; labels help sell the sauce system.

Allergen notes: Contains dairy/egg/soy/sesame depending sauces.

Food cost logic: Very high margin. Also educates customers into buying sauce add-ons.

Menu pricing logic: Sell as bar board or free VIP tasting that leads to bottled sauce sales.

Cross-application opportunities: Bar snack, sauce sampling, retail sauce test, VIP club teaser.

NotebookLM tags / future retrieval relevance: sauce-flight; pickle-board; high-margin; productization; bar-snack

Module G - Catering Tray and Family Bundle Systems

Commercial function inside the venue: Catering turns prep into high-ticket orders. The system must convert existing components into controlled bundles with clear yields, preorder deadlines, packaging standards, and margin logic.

Office Power Bowl Tray System

Commercial position / venue role: Corporate lunch tray designed for predictable prep, easy service, and high perceived abundance.

Standard batch yield: Feeds 20 people.

Ingredient	Metric quantity
Coconut Turmeric Rice Base	5.0 kg
Korean Soy Chicken Pan Protein	3.2 kg
Black Pepper Beef Wet Fry	2.0 kg
Pickled vegetables	1.5 kg
Green Herb Lime Crema	800 ml
Gochu-BBQ Sticky Glaze	600 ml

Production method

1. Tray rice in two large catering pans.
2. Place chicken on one side and beef on the other for choice architecture.
3. Add pickles in separate inserts to protect texture.
4. Pack sauces separately in labelled bottles.
5. Include service spoons and allergen card.

Prep-ahead and holding notes: Requires preorder by 4pm previous day. Proteins cooked and chilled, finished morning of service.

Reheating or service finish notes: Deliver hot above 63 C or chilled with reheat instructions depending client setup.

Packaging/plating notes: Use black catering trays, garnish after delivery if possible.

Allergen notes: Contains soy, sesame, dairy/egg if crema used.

Food cost logic: Two proteins and one base create variety without complex production.

Menu pricing logic: Price per head with minimum 20; charge delivery and premium sauce add-ons.

Cross-application opportunities: Office lunch, meeting catering, recurring Friday corporate plan.

NotebookLM tags / future retrieval relevance: corporate-catering; office-bundle; rice-tray; recurring-revenue; preorder

Weekend Family Allocation Tray

Commercial position / venue role: Scarcity-driven family meal with real production cap.

Standard batch yield: Feeds 6-8 people.

Ingredient	Metric quantity
Coconut Turmeric Rice Base	2.5 kg
Coconut Goat Wet Fry	2.0 kg
Tamarind Coconut Fish or chicken substitute	1.2 kg
Crispy Potato Hash Base	1.2 kg
Pickles	600 g
Sauce flight	600 ml total

Production method

1. Pack rice as base layer.
2. Pack goat wet fry and fish/chicken in separate sealed trays.
3. Pack potato hash separately to preserve texture.
4. Add sauce flight and garnish pack.
5. Include reheat card and allocation number.

Prep-ahead and holding notes: Sell by preorder only. Cap based on goat/fish production capacity.

Reheating or service finish notes: Customer reheats wet items covered; potatoes uncovered in hot oven.

Packaging/plating notes: Use numbered labels: Allocation 01/20, 02/20, etc. Only use true counts.

Allergen notes: Contains fish/coconut/soy/sesame/dairy depending chosen sauces.

Food cost logic: High ticket order from existing components. Preorder eliminates speculative waste.

Menu pricing logic: Price as family experience, not per item. Use deposit to lock demand.

Cross-application opportunities: Weekend drop, holiday tray, VIP club, family dinner subscription.

NotebookLM tags / future retrieval relevance: family-bundle; allocation-tray; weekend-drop; preorder; high-ticket

Safari Lounge Sauce and Protein Catering Pack

Commercial position / venue role: White-label catering product for small events and venue consulting clients.

Standard batch yield: Feeds 30 people.

Ingredient	Metric quantity
Safari Char-Grill marinated chicken	6.0 kg cooked
Black Pepper Beef Wet Fry	4.0 kg
Coconut Turmeric Rice Base	8.0 kg
Smoky Tomato Pilau Rice	5.0 kg
Gochu-BBQ Sticky Glaze	1.2 litres
Green Herb Lime Crema	1.2 litres
Pickled vegetables	2.0 kg

Production method

1. Prepare proteins as separate lanes.
2. Pack two rice bases to create variety.
3. Serve sauces separately with labels.
4. Provide menu cards explaining each sauce and protein lane.

Prep-ahead and holding notes: Requires 48-hour preorder for staffing and procurement.

Reheating or service finish notes: Hot delivery or chilled reheat pack depending event site.

Packaging/plating notes: Catering labels should sell the IP: marinade bank, sauce bank, protein lanes.

Allergen notes: Contains soy, sesame, dairy, egg, coconut depending sauces.

Food cost logic: This is a consulting demo in edible form: client tastes the system and sees the operational architecture.

Menu pricing logic: Price as premium catering plus IP demonstration. Upsell consulting audit.

Cross-application opportunities: Venue demo, corporate tasting, consulting lead magnet, white-label catering pack.

NotebookLM tags / future retrieval relevance: catering-pack; consulting-demo; sauce-bank; protein-lanes; Safari-Lounge-IP

Module H - Weekly Specials / Preorder / WhatsApp Ritual Drops

Commercial function inside the venue: Weekly drops train demand. The point is not random specials; it is a predictable commercial ritual using real allocation limits, preorder cutoffs, waitlists, and visible fulfillment.

Thursday Char Siu Rice Box Drop

Commercial position / venue role: Weekly office and WhatsApp lunch ritual built from pork/chicken glaze pattern.

Standard batch yield: 40 boxes.

Ingredient	Metric quantity
Char-grill marinated pork or chicken	6.4 kg cooked
Gochu-BBQ Sticky Glaze	1.2 litres
Coconut Turmeric Rice Base	10.0 kg
Pickled cucumber	2.0 kg
Green Herb Lime Crema	1.0 litre
Sesame garnish	120 g

Production method

1. Announce menu Monday with 40-box allocation.
2. Close preorder Wednesday 4pm.
3. Cook protein Thursday morning, glaze hot.
4. Pack rice, protein, pickles, sauce, garnish.
5. Post sold count honestly as orders close.

Prep-ahead and holding notes: All components except protein finish are prep-ahead. Allocation cap is based on packing labour.

Reheating or service finish notes: Boxes are best served same day. Reheat protein/rice covered if needed.

Packaging/plating notes: Use numbered stickers and branded drop language.

Allergen notes: Contains soy, sesame, dairy/egg depending crema.

Food cost logic: Prepaid boxes reduce waste and create weekly habit.

Menu pricing logic: Price as premium lunch drop. Offer office bundle discount at 10+ boxes.

Cross-application opportunities: Office lunch, WhatsApp drop, ghost kitchen test, VIP preview.

NotebookLM tags / future retrieval relevance: weekly-drop; char-siu-pattern; WhatsApp-preorder; office-box; ritual-demand

Friday Coconut Goat Family Pot

Commercial position / venue role: High-ticket weekend allocation using slow-cooked protein scarcity.

Standard batch yield: 20 family pots; each feeds 4.

Ingredient	Metric quantity
Coconut Goat Wet Fry	24.0 kg finished
Coconut Turmeric Rice Base	20.0 kg
Pickled chili	2.0 kg
Flatbread	80 pieces
Green Herb Lime Crema	2.0 litres

Production method

1. Open preorder Tuesday to VIP list.
2. Open public waitlist Wednesday if capacity remains.
3. Cook goat Thursday, finish Friday.
4. Pack family pots with reheat instructions.
5. Record waitlist demand for next week's allocation.

Prep-ahead and holding notes: Goat cookery is the real bottleneck; cap honestly.

Reheating or service finish notes: Reheat goat covered to 75 C. Rice steams separately.

Packaging/plating notes: Number each family pot and include garnish pack.

Allergen notes: Contains coconut, dairy/egg depending crema, gluten if flatbread included.

Food cost logic: Slow protein and family format justify higher basket size.

Menu pricing logic: Bundle price with optional extra flatbread, sauce, or potato side.

Cross-application opportunities: VIP club, family subscription, holiday preorder, catering lead.

NotebookLM tags / future retrieval relevance: goat-drop; family-pot; weekend-allocation; high-ticket; slow-protein

Saturday Sticky Wing and Sauce Flight

Commercial position / venue role: Bar and delivery drop designed to sell sauces and drive beverage spend.

Standard batch yield: 60 snack portions.

Ingredient	Metric quantity
Sticky Gochu Wings	300 wings prepared
Green Herb Lime Crema	1.5 litres
Gochu-BBQ Sticky Glaze	2.0 litres
Pickles	2.0 kg
Flatbread crisps or fries	6.0 kg

Production method

1. Pre-announce sauce flavours Thursday.
2. Run two pickup windows Saturday.
3. Cook wings in waves; never hold sauced wings too long.
4. Offer sauce flight as paid upgrade.

Prep-ahead and holding notes: Dry-season wings day before. Sauce packs portioned before service.

Reheating or service finish notes: Reheat unsauced wings only. Sauce after reheating.

Packaging/plating notes: Use share boxes with sauces side-car.

Allergen notes: Contains soy, sesame, dairy/egg depending sauce.

Food cost logic: Wings create craving and sauce sampling; sauces become future retail IP.

Menu pricing logic: Price wings competitively; earn margin on sauce flight and sides.

Cross-application opportunities: Bar night, delivery drop, sauce launch, game-day preorder.

NotebookLM tags / future retrieval relevance: wing-drop; sauce-flight; bar-revenue; shareable; retail-sauce-test

Commercial Control Appendices

These appendices turn the production recipes into a sellable hospitality system. They are designed for a chef-owner, consultant, operator, or NotebookLM user who needs to move from culinary ideas into execution, pricing, bundling, staff training, and repeat revenue.

Appendix 1 - Venue Operating Model

The pack is built around a three-lane venue model:

Lane	Function	Revenue Type	Prep Dependency	Customer Psychology
Daily Trade	bowls, wraps, snacks, sides	repeat cash flow	sauces, rice, pan proteins	low-thought yes, familiar comfort
Catering Trade	trays, office bundles, family packs	high-ticket orders	rice bases, proteins, sauces, packaging	group justification, abundance, convenience
Ritual Drops	weekly specials, WhatsApp preorders, VIP allocations	demand control	hero proteins, limited sauce batches	scarcity, visible allocation, urgency

The strategic advantage comes from making these lanes share the same mise en place. A weak food business creates new prep for every channel. A strong one turns the same prep into different buying contexts. The customer sees variety; the kitchen sees repetition.

Appendix 2 - Master Prep Dependency Map

Prep Component	Feeds Daily Trade	Feeds Catering	Feeds Weekly Drops	Feeds Retail/Product IP
Safari Char-Grill Master Marinade	skewers, bowls, wraps	grilled trays	Thursday char-grill boxes	bottled marinade / consulting IP
Gochu-BBQ Sticky Glaze	wings, pork, beef, fries	sauce flight, tray finish	sticky wing drop	bottled sauce / dip flight
Coconut Curry Wet Fry Base	curry bowls, fish, veg	family curry trays	goat/fish allocation	frozen curry base
Green Herb Lime Crema	wraps, fish, fries	sauce side packs	snack upgrades	cold sauce / dressing line
Base Wet Fry Aromatic Mix	beef/goat/chicken pan finish	hot tray proteins	wet fry limited specials	chef prep system
Coconut Turmeric Rice Base	bowls	office trays	family bundles	low-cost base formula
Smoky Tomato Pilau Rice	BBQ bowls, Tex-Mex wraps	event trays	roast beef specials	venue menu architecture
Crispy Potato Hash Base	snacks, breakfast, sides	family tray add-on	loaded hash drop	brunch and bar system

Operational rule: any new item must use at least two existing components or it remains a test item only.
Permanent menu space is earned by cross-utilisation.

Appendix 3 - Weekly Production Rhythm

Monday - Data and prep reset

- Review previous week: top sellers, waste, sold-out points, prep shortages, customer requests.
- Decide one ritual drop for the week.
- Confirm supplier availability for hero protein.
- Produce sauce bank: glaze, crema, curry base, marinade.
- Publish first teaser if running preorder.

Tuesday - Protein commitment

- Trim and marinate proteins.
- Cook wet fry aromatic base.
- Cook goat/beef/fish prep if drop requires longer lead time.
- Push VIP preorder or office admin message.
- Update allocation count based on real prep capacity.

Wednesday - Carbohydrate and packaging lock

- Cook rice bases if orders are known, or prep dry measured batches.
- Confirm packaging inventory: trays, bowls, labels, sauce cups, allergen cards.
- Close large office orders by 4pm.
- Start waitlist capture for overflow demand.

Thursday - Daily trade plus drop production

- Finish proteins in controlled batches.
- Pack office bowls or lunch drops.
- Record actual labour time per batch.
- Photograph finished trays for future sales proof.

Friday/Saturday - family tray and bar snack push

- Run high-margin snack specials.
- Sell sauce flight upgrades.
- Convert leftover proteins into controlled secondary items: wraps, hash, staff meal, or next-day fried rice only if food-safe.

Sunday - private intelligence review

- Score each item: sales, waste, labour, customer comments, repeat demand.
- Update NotebookLM/database tags.
- Decide what becomes permanent, what becomes seasonal, and what dies.

Appendix 4 - Station Breakdown

Sauce Station

Responsibilities:

- Produce marinade, glaze, crema, curry base, sauce flight portions.
- Label allergens and date codes.
- Maintain sauce bottle par levels.
- Record sauce usage against sales channels.

Critical controls:

- Never reuse raw-protein marinade as service sauce.
- Keep cold sauces below 5 C.
- Keep hot sauces above 63 C during service.
- Separate sesame/soy/dairy sauces for allergen clarity.

Protein Station

Responsibilities:

- Trim and portion proteins.
- Marinate according to protein-specific time limits.
- Cook hero proteins and pan proteins.
- Track yield loss before and after cooking.

Critical controls:

- Chicken and fish require tighter batch planning than beef/goat.
- Hero proteins should create trim usage plans before production begins.
- High-crisp items should not be placed into delivery menus unless packaging protects texture.

Base Station

Responsibilities:

- Cook rice bases, potato hash, flatbread crisps, and carrier systems.
- Protect margin through exact portion control.
- Build tray base layers quickly during catering assembly.

Critical controls:

- Rice cooling must follow food-safety rules.
- Potatoes must be held dry if crispness is part of the value.
- Carbohydrate portion creep destroys margin quietly.

Assembly Station

Responsibilities:

- Build bowls, wraps, boxes, trays, and drop packages.
- Apply visual abundance: base first, protein visible, sauce gloss, garnish contrast.
- Check allergen cards and labels.

Critical controls:

- Sauce side-car for delivery unless gloss is central to the sell.
- Number allocation trays where scarcity is part of the ritual.
- Photograph real finished products for future demand signalling.

Appendix 5 - Menu Engineering Logic

A dish earns menu space if it scores well across these commercial dimensions:

Dimension	High Score Signal	Low Score Risk
Familiarity	customers understand it quickly	needs too much explanation
Novelty	sauce or format feels fresh	feels generic or copied
Batchability	can be cooked in controlled batches	only works one-by-one
Holding	survives delivery/hot hold	collapses after 10 minutes
Cross-utilisation	uses shared prep	needs unique inventory
Margin	base and sauce protect protein cost	protein-heavy and labour-heavy
Visual value	looks abundant and glossy	appears small or dry
Ritual potential	can be limited by true prep capacity	no reason to preorder

Permanent menu items must satisfy familiarity, margin, and cross-utilisation. Weekly specials may carry more novelty, but they still need operational sense. Catering products must satisfy holding, packaging, and group justification.

Appendix 6 - Channel-Specific Menu Architecture

Daily Lunch

Core offer:

- 3 bowls: chicken, beef, vegetarian.
- 3 wraps: chicken, beef, curry vegetable.
- 2 sides: potato hash and pickles.
- 3 sauces: glaze, crema, curry sauce.

Function:

Daily lunch should be easy to order, fast to assemble, and built from existing prep. It creates steady sales and collects signal for what can become a drop or catering tray.

Bar / Evening

Core offer:

- Sticky wings.
- Loaded wet fry potato hash.
- Pickle and sauce flight.
- Crispy fish bites.

Function:

Bar food should increase dwell time and drink spend. The menu should be salty, shareable, saucy, and visually satisfying. Avoid overly complex plated dishes during bar trade.

Catering / Office

Core offer:

- Office Power Bowl Tray.
- Sauce and Protein Catering Pack.
- Family Allocation Tray.

Function:

Catering converts operational repetition into high-ticket orders. It should use the same sauces, proteins, rice bases, and sides as daily trade, only in different packaging and quantity logic.

Weekly Drop

Core offer:

- One hero protein.
- One base.
- One sauce identity.
- One allocation count.
- One pickup or delivery window.

Function:

Weekly drops create ritual demand and reduce production uncertainty. The drop is not just a dish. It is a demand measurement tool.

Appendix 7 - Food Cost Logic Templates

Bowl Price Logic

Formula:

- Base cost: rice or potato portion.
- Protein cost: exact cooked portion weight.
- Sauce cost: 20-40 ml controlled portion.
- Garnish cost: pickles/herbs/sesame.
- Packaging cost: bowl, lid, label, napkin.
- Labour factor: prep and assembly minutes.

Target:

- Food cost: 24-32%.
- Gross margin: 68-76%.
- Upsell: extra sauce, egg, extra protein, premium side.

Wrap Price Logic

Formula:

- Wrap bread cost.
- Rice/filler cost.
- Protein portion lower than bowl.
- Sauce and pickle portion.
- Packaging cost.

Target:

- Food cost: 22-30%.
- Margin improves because protein portion is controlled by format.

Catering Tray Logic

Formula:

- Ingredient cost x target multiplier.
- Add packaging.
- Add delivery.
- Add labour.
- Add admin and contingency.
- Add premium for preorder convenience and reliability.

Target:

- Minimum order protects labour.
- Separate delivery line prevents hidden margin erosion.
- Require deposit or full prepayment for high-risk proteins.

Sauce Retail Logic

Formula:

- Ingredient cost.
- Bottle/jar/sachet.
- Label.
- Compliance/testing.
- Labour.
- Spoilage allowance.
- Retail margin.

Target:

- Sauce should be proven in venue first.
- Only bottle sauces that customers already request extra.

Appendix 8 - NotebookLM Retrieval Ontology

Use consistent tags so the manual becomes a retrieval source:

Tag Family	Examples	Retrieval Use
component	marinade-bank, sauce-bank, rice-base, wet-fry-base	find reusable prep systems
channel	lunch-trade, bar-snack, catering, weekly-drop	build menus by revenue channel
economics	margin-absorber, premium-pricing, high-ticket, low-cost-variety	answer business questions
operations	batchable, delivery-friendly, prep-ahead, holding	answer kitchen execution questions
psychology	scarcity-drop, abundance-illusion, shareability, low-thought-yes	answer demand design questions
risk	allergen, seafood-risk, crispness-risk, rice-safety	answer safety and execution risk questions
brand	Safari-Lounge-IP, Afro-Asian-Latin, fusion-special	answer brand/IP questions

Suggested NotebookLM questions:

- Which components support the most revenue channels?
- Build a three-day prep plan for the weekly drop system.
- Which items are best for corporate catering and why?
- Which sauces can become retail products?
- What is the lowest-inventory menu that still feels abundant?
- Build a bar snack menu that increases drink spend.
- Build a Friday WhatsApp preorder offer from existing prep.
- Which modules create Safari Lounge IP?

Appendix 9 - Consulting Product Packaging

This niche pack can be sold as a consulting product without selling recipes directly.

Product 1: Menu Profit Compression Audit

Buyer:

- Small restaurant.
- Caterer.
- Ghost kitchen.
- Bar with weak food program.

Promise:

- Reduce menu complexity while increasing perceived variety.

Deliverables:

- Current menu component map.
- Cross-utilisation audit.
- Sauce bank recommendation.
- Base/starch margin map.
- Three weekly drop concepts.
- Catering conversion plan.

Price:

- Entry: \$500-\$1,000.
- Implementation: \$2,500-\$7,500.
- Monthly support: \$750-\$2,500.

Product 2: Catering Tray Revenue Blueprint

Buyer:

- Caterer.
- Cafe near offices.
- Restaurant with slow weekdays.

Promise:

- Turn existing prep into higher-ticket office and family trays.

Deliverables:

- Three tray products.
- Pricing sheet.
- Packaging list.
- Preorder script.
- Allergen card.
- Production schedule.

Price:

- Template: \$99-\$299.
- Custom build: \$1,500-\$5,000.
- Monthly tray calendar: \$299-\$1,000.

Product 3: Weekly Food Drop Operating System

Buyer:

- Home chef.
- Pop-up.
- Food creator.
- Small venue needing attention.

Promise:

- Make demand visible before production through preorder ritual.

Deliverables:

- Four-week drop calendar.
- WhatsApp scripts.
- Allocation rules.
- Production prep list.
- Waitlist system.
- Post-drop data review sheet.

Price:

- Starter: \$49-\$149.
- Done-with-you: \$500-\$1,500.
- Monthly command: \$299-\$999.

Appendix 10 - Preorder and WhatsApp Scripts

Office Lunch Drop

Message:

"Thursday office lunch allocation is open. This week's box is Safari char-grill chicken over coconut turmeric rice with pickles and green herb crema. 40 boxes only because production closes Wednesday 4pm. Reply with name, quantity, and delivery location."

Follow-up:

"Allocation update: 27/40 boxes reserved. Preorder closes at 4pm or when the remaining 13 are gone."

Close:

"Orders are locked. If you missed this round, reply WAITLIST and you will get first access next week."

Family Tray Drop

Message:

"Weekend family tray allocation opens today for VIPs. Coconut goat wet fry, turmeric rice, potato hash, pickles, and sauce flight. 20 trays only because goat production is capped. Deposit confirms allocation."

Follow-up:

"12/20 family trays confirmed. Public waitlist opens tomorrow if any remain."

Close:

"Sold out. Waitlist is open for next Friday. Waitlist demand decides whether we repeat goat or switch to fish."

Sauce Flight Bar Push

Message:

"Tonight's sauce flight: sticky gochu-BBQ, green herb lime crema, coconut curry dip. Add to wings, fish bites, or loaded hash. Limited flight portions because sauces were batched fresh today."

Appendix 11 - Allergen and Food Safety Control

Key allergen risks:

- Soy: marinades and glazes.
- Sesame: gochu glaze and Korean-style finishes.
- Dairy/egg: crema and mayonnaise-based sauces.
- Fish: fish trays and fish bites.
- Gluten: wraps, flatbreads, some gochujang, soy sauce.
- Coconut: curry base and coconut rice.

Food-safety controls:

- Raw marinade never becomes service sauce.
- Rice must be cooled rapidly and reheated thoroughly.
- Seafood should be cooked close to service and controlled by preorder.
- Cold sauces must remain chilled.
- Hot wet-fry items must be hot-held safely or cooled quickly.
- Fried/crispy items should not be sealed too early or texture will collapse.

Label requirements:

- Item name.
- Production date.
- Use-by date.
- Major allergens.
- Reheat instructions for take-home trays.
- Allocation number for preorder drops.

Appendix 12 - Supplier and Procurement Logic

Proteins:

- Chicken thigh: daily volume item, stable cost, good reheating.
- Beef: premium signal, use in controlled portions.
- Goat: cultural strength and scarcity value, preorder only.
- Fish: premium but higher waste risk, preorder or limited service.
- Wings: bar snack and drop item, strong demand signal.

Dry goods:

- Rice, potatoes, flatbreads, spices, sugar, vinegars, oils.
- These are margin stabilizers. Buy in volume only after usage is proven.

Sauces and condiments:

- Soy/tamari.
- Gochujang or chili paste.
- Coconut milk.
- Tomato paste.
- Vinegars.
- Honey or brown sugar.

Packaging:

- Black bowls for visual contrast.
- Kraft wrap paper.
- Numbered tray labels.
- Sauce cups.
- Allergen cards.
- Reheat cards.

Appendix 13 - Staff Training Notes

Staff should understand the pack as a system:

- Sauce bank creates identity.
- Protein lanes create menu value.
- Rice and potato bases protect margin.
- Wraps convert prep into lunch.
- Snacks convert prep into alcohol spend.
- Catering converts prep into large orders.
- Drops convert prep into demand data.

Staff language:

- Do not describe items as "just chicken" or "just rice."
- Say "char-grill marinade," "sticky gochu glaze," "coconut turmeric rice," "limited family allocation."
- Sell sauces as the identity of the menu.
- Offer sauce upgrades naturally.
- Mention preorder cutoffs clearly.

Appendix 14 - AI Retrieval and Future API Readiness

Every item in this pack can later become a structured API object:

- `item\_name`
- `module`
- `venue\_role`
- `batch\_yield`
- `ingredients`
- `method`
- `holding`
- `packaging`
- `allergens`
- `cost\_logic`
- `pricing\_logic`
- `cross\_applications`
- `tags`

Retrieval use cases:

- Generate a catering quote from available prep.
- Build a weekly drop menu from sauce inventory.
- Suggest a lunch wrap from leftover pan protein.
- Find all items containing soy/sesame.
- Find all products suitable for bottled sauce development.
- Find all high-margin bar snacks.
- Build an office bundle using one rice base and two proteins.

The manual therefore serves both human operations and future AI retrieval.

Final Commercial Architecture

This niche pack becomes monetizable because every module feeds the next:

- Module A creates the proprietary taste bank.
- Module B creates repeatable hot protein revenue.
- Module C creates hero products and brand memory.
- Module D protects margin and visual abundance.
- Module E converts prep into lunch and delivery.
- Module F converts prep into beverage and snack spend.
- Module G converts prep into high-ticket catering.
- Module H converts prep into ritual demand and preorder certainty.

NotebookLM Source Strategy

Upload this manual alongside the database schema, sample API responses, and production CSV. Use NotebookLM queries such as:

- Which sauce feeds the most revenue channels?
- Build a Friday preorder menu from existing prep.
- Which items are best for office catering?
- What is the lowest-inventory menu with highest variety?
- Which components can become bottled products?
- Build a Safari Lounge weekly drop from Module A, D, and H.

Pricing Control Formula

Target menu price should be set by channel:

- Dine-in bar snacks: ingredient cost x 4.0 to 5.5.
- Lunch wraps/bowls: ingredient cost x 3.2 to 4.2.
- Family trays: ingredient cost x 3.0 to 3.8 plus packaging and preorder convenience.
- Catering: ingredient cost x 3.5 plus labour, delivery, equipment, and admin.
- Sauce retail: ingredient cost x 5.0+ after packaging and compliance.

Operational Control Rules

1. Never launch a dish unless it reuses at least two existing components.
2. Every weekly special must produce either preorder data, sauce demand data, or catering lead data.
3. Every catering tray must be built from the same prep streams used by daily trade.
4. Every sauce must have at least three applications before it earns menu space.
5. Every hero protein must produce a secondary use for trim, leftovers, or controlled overproduction.
